

FULFILLING DREAMS

What is the most magical thing in the world: the birth of a child. There is no other feeling as compared to having a baby and delivering a baby. Dr Amol Lunkad is helping couples who can't conceive naturally, have a baby through IVF technology. By Himani Bhatt.

Dr Amol Lunkad is the medical director at Indira IVF as well as a leading gynaecologist, laparoscopy and infertility specialist in Pune, Maharashtra. He and his team have undertaken more than 24000 success IVF/ICSI pregnancies all over India till now; he has brought smiles to 24000 homes! His special interest in reproductive endocrinology has been awarded at various national and international conferences. To add stars to his career, Dr Lunkad was chosen as one of the most inspiring gynaecologists of west India by Economic Times. Dr Lunkad says, "Couples trying for pregnancy for one year or more should consult a good infertility specialist and get themselves evaluated for the cause" and according to the proper cause, the couple should take proper scientific treatment. He adds, "Couples having a tubal blockage or ovulation problems or severe problem in semen or failure of three IUI cycles or those who have taken usual treatment for more than two years, should think of advanced treatments like in-vitro fertilization or test

tube baby." There are so many techniques through which a couple can conceive or have a child. Egg and embryo freezing is one such technique. It can be helpful for the women who want to delay their pregnancy due to education or career, can freeze their eggs at a younger age and use those years later to achieve pregnancy. This technology is boon to humankind. There is one more spectacular opportunity for women or men with any cancer as they can also freeze their eggs or sperm before undergoing radiotherapy or chemotherapy, for further use. Couples who want to delay childbirth can also freeze their embryos. Those couples undergoing IVF process should also freeze their extra embryos. Indira IVF offers this facility. There are two reasons that one might want to visit a fertility clinic. One is if you aren't able to have a baby through natural means, or if you want to store your eggs or sperm for a later date for any reason. Indira IVF deals with both these options and Dr Lunkad and team are well-equipped to ensure the processes run smoothly.

TESTIMONIALS

In 2016, we we're devastated as we lost our only child of 21 years to blood cancer. My wife was 45 years and had reached menopause and had complications of diabetes and thyroid. We heard about Dr Amol Lunkad and his success in attaining IVF pregnancies upto 60-65 years of female age. He and his team tested us and informed that pregnancy was possible by an oocyte donation IVF technique. My wife achieved pregnancy within 2.5 months and we were blessed with wonderful twins in June 2017. Thanks to modern scientific techniques and Dr Amol Lunkad and his team we are leading a happy life with our children.
- Chandrashekhar Madkaikar, Goa

"We are married for 15 years and have had five successful trials of five IVF cycles in Mumbai. We were exhausted but when we came to know about Dr Amol Lunkad, we decided to visit him. In our first visit itself, we were made aware about reasons of failed IVF and provided with apt solution for the same. Using various advanced techniques and personal guidance we achieved pregnancy in the first attempt at Indira IVF Pune. Laser hatching, Closed Working Chamber technology along with ICSI and Blastocyst Culture helped us. an angelic baby girl came to us in mArch 2018 and has filled our lives with joy.
